Welcome to GRAITEC Advance POWERPACK Autodesk® Inventor® 2022

GRAITEC is very pleased to present the latest version of Advance PowerPack for Autodesk® Inventor® 2022, part of the Graitec Advance Suite.

This document contains the description of new options and improvements on PowerPack for Autodesk® Inventor® 2022.

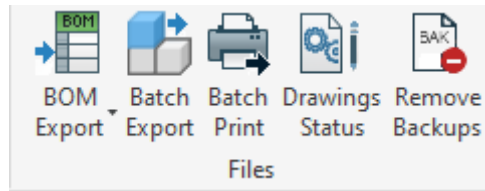

New Features

Remove backups

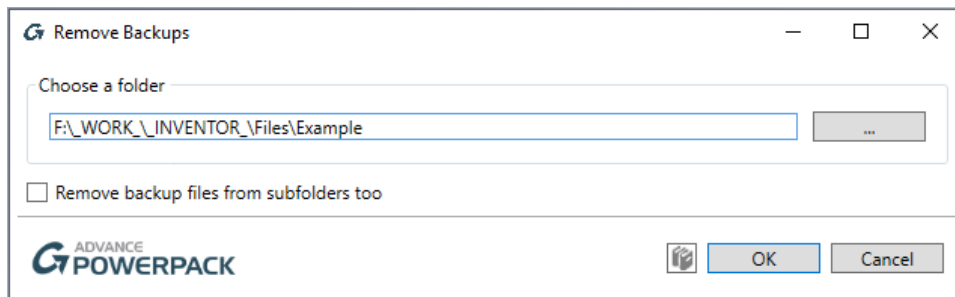

This command allows users to remove the backups that are automatically created by the Inventor in the *OldVersions* folder.

The command has been added to the *Files* panel and it is available in any environment:

The *Remove Backups* dialog, allows users to:

- Choose an *OldVersions* folder or a project folder which contains the *OldVersions* folder;
- Choose whether the backups from subfolders should be removed or not.

Improvements & bug fixes

Batch Export

- Added a new filter to show/hide backup files;
- Added a new option for the export to PDF, which combines all selected documents into a single PDF file;
- Fixed an issue where the *Export all* function would export non-filtered items.
